Identify configuration items to be placed under government program office configuration management (CM). Identify the associated artifacts to be contained in the program’s technical baselines. Determine when in the acquisition life cycle the government program office will assume initial and full configuration control of its technical baselines.

Configuration-Management - DAU

1.1 Overview. Briefly, a boot loader is the first software program that runs when a computer starts. It is responsible for loading and transferring control to an operating system kernel software (such as Linux or GNU Mach). The kernel, in turn, initializes the rest of the operating system (e.g. a GNU system).
