Chevrolet Alarm, Remote Start, and Stereo Wiring

Hi John, it sounds like an accessory wire at the ignition harness is not being powered by the remote start. You can check if the large gage orange wire from the remote start is connected to something in the car. Your car could also have multiple accessory wires which would require a relay to power all of them.

The E100 relay provides the following features: The E100 relay lets you connect accessory modules, some of which interface through the front-mounted communication port. Accessories include: Throughout this publication, we also refer to the E100 Electronic Overload Relay as the E100 overload relay and E100 relay. These terms are interchangeable.

E100 Electronic Overload Relay Specifications

This relay module has two channels (those blue cubes). There are other models with one, four and eight channels. This module should be powered with 5V, which is appropriate to use with an Arduino. There are other relay modules that are powered using 3.3V, which is ideal for ESP32, ESP8266, and other microcontrollers. Get a relay module:

Guide for Relay Module with Arduino | Random Nerd Tutorials

You might already have noticed that the Starter Kits are slightly different. Some include a HMI, some do not. One of the Starter Kits even includes an RF reader (SIMATIC RF200), so you can build an RFID system with the PLC. In all the kits, the following are included: SIMATIC S7-1200 CPU 1212C (AC/DC supply - Relay outputs) Input Simulator

Siemens 57-1200: Starter Kit for Pro Learners

Starter was an exact match for my Johnson 28 hp outboard. Fast shipping and a fairly easy installation. Works great & I feel that this was a great value compared to a local marina that wanted \$158 for an aftermarket starter. Well packaged and shipped Priority Mail. Thanks!
